Re: Annual HMA Plant Approval
Facility: H0354

Gentlemen:

On February 26, 2009 personnel from the Materials Bureau staff inspected your bituminous concrete production facility located in Flushing, New York.

As a result of this inspection, it has been determined that the physical plant features, the automation and recordation equipment at this facility are in conformance with the requirements outlined in Section 401 of the New York State Department of Transportation Specifications of May 1, 2008, as amended.

Approval is hereby given to supply bituminous concrete from this facility to department projects during the 2009 construction season.

Your continued approval will be contingent upon satisfactory and timely completion of the scale checks, adherence to an approved control plan, and all applicable safety requirements.

Yours truly,

Paul Anderle,
Regional Materials Engineer, R-11

cc: R. Dhamhere, Materials & Geotech Supervisor, R-11
